

ENTERPRISE SAAS · MARITIME

Client Portal

for a fleet of 650 vessels

Shipowners had to chase five different teams to answer one question: how is my vessel doing? The portal replaces that with a single window onto position, performance, cost, crew and compliance — updated daily, readable in ninety seconds.

WEEKLY ACTIVE CLIENT ACCOUNTS

Anglo-Eastern manages vessels on behalf of owners: crewing them, maintaining them, keeping them compliant and reporting the cost. The owner is the client — and until this project, the client's view of their own fleet arrived as email attachments.

Monthly OPEX in one spreadsheet. Inspection outcomes in another. Crew changes over the phone. The portal brings all of it into one authenticated product, structured around the two questions owners actually ask: *where is my ship*, and *what is it costing me*.

SEAFARERS REPRESENTED

02 The problem

"I get eleven reports a month and still can't tell you which of my ships is about to cost me money."

FLEET DIRECTOR, DRY BULK OWNER — 14 VESSELS

PAIN 01

Data arrives, insight doesn't

Owners received PDFs and spreadsheets with no way to compare a vessel against the fleet or against last month.

PAIN 02

Every answer needed a person

Routine questions — next port, crew change, open defects — went through account managers by email.

PAIN 03

Six systems, six vocabularies

The same vessel carried different names, codes and cost categories depending on which system produced the report.

WHAT OWNERS ASKED US FOR, BY MENTION

THREE INSIGHTS THAT SHAPED THE PRODUCT

- 01 The map is the index.**
Owners think in vessels, not modules. Every path into detail starts from a ship on a chart.
- 02 A number without a baseline is noise.**
Every KPI had to carry its comparison — fleet average, last month, or budget.
- 03 Trust needs a timestamp.**
Daily-synced data was accepted once every panel said exactly when it was last updated.

04 Personas

THREE CLIENT-SIDE ROLES

Marit · Fleet Director CHECKS DAILY · 5 MIN SESSIONS GOAL Spot the vessel that needs attention before the owner calls. FRUSTRATION Reports that describe last month, not this week.	Ravi · Financial Controller MONTHLY · 40 MIN SESSIONS GOAL Reconcile OPEX against budget and explain every variance. FRUSTRATION Re-keying numbers out of PDFs into his own model.	Elena · Technical Superintendent WEEKLY · DEEP SESSIONS GOAL Track inspections, defects and dry-dock readiness per ship. FRUSTRATION No single list of what is open and what is overdue.
---	--	--

NOTICE	GATHER	COMPARE	ESCALATE	REPORT OUT
OPEX summary lands by email; one vessel looks off.	Requests the detail file, the crew list and the last inspection.	Builds a sheet to compare the ship to the rest of the fleet.	Calls the account manager; waits a day for context.	Summarises for the owner, often without the full picture.
EMOTION Curious	 Impatient	 Frustrated	 Blocked	 Exposed
Fleet KPI alerts surface the outlier first.	One vessel page holds cost, crew and inspections.	Every KPI ships with its fleet baseline.	Contextual contact on the record itself.	Export the exact view as PDF or XLS.

V1 · MAP + LIST
Split view tested badly: the list won attention, the map became decoration.

V2 · MAP + RAIL
Detail moved to a persistent right rail so context never disappears.

V3 · SHIPPED
KPI tiles paired with baselines; the rail became the product's spine.

01 Vessel overview — position, KPIs with fleet baselines, voyage snapshot and crew in one rail.

02 OPEX report — budget, actual and variance held on one row, colour-coded against target.

03 Inspections — searchable, sortable, exportable per port.
